Tips For Successfully Uploading A Video On YouTube

Hi Woodstocktel.net Subscribers

Halloween brings all kinds of costumed characters to our front doors. And while guessing which child is behind each mask is fun, trying to identify scammers dressed up as credible organizations can be challenging. To help you, this October issue begins with a **warning about gift card scams masquerading as free offers** from major retailers.

Speaking of costumes, the Great Sites list includes one with lots of **easy-to-make costume ideas for Halloween.** You'll also want to check out the sites for resources on road trip planning, fall recipes, credit management, and more. Take a minute to **learn about firewalls** and make sure yours is turned on, and review the tips we've shared about **uploading videos to YouTube.** Don't miss this month's videos featuring a **joyful flash mob** and a **wheelchair-bound ocean explorer.**

The goal of each of our eNewsletters is to keep our subscribers informed regarding their Internet connection and to improve their Internet experience. We think you'll find this information interesting.

To see what's inside this issue, simply scroll down the eNewsletter or click on the links within the index to the left. Thanks for reading!

Scam Alert - Don't Fall For Free Gift Card Scams

The Better Business Bureau is the latest established brand to be used by scammers to promote fake gift cards online. (Others have included Wal-Mart, Target, Starbucks, and Best Buy.) As tempting as these offers appear, especially with the holiday shopping season

approaching, don't bother trying to redeem them. They're just tricks to collect consumer data; you won't receive the free gift card promised.

It works like this: The recipient receives an email, claiming to be from the established brand, stating that he/she has been issued a gift card worth a certain dollar amount. To receive this gift card free of charge, the recipient is told to immediately go to a website and provide information such as age, street address, email address, and phone number. Don't fall for it. You would be giving out personal information and receiving nothing but more spam in return.

In addition, experts warn that used, counterfeit, and fraudulent gift cards are frequently being sold on auction websites. For this reason, don't buy gift cards from auction websites; it's not worth the risk of ending up with a worthless piece of plastic. Only buy gift card directly from the store or from a secure retailer's website.

Tips For Parents On Internet Safety

While the Internet is filled with many valuable resources, it can also pose a threat to your children. They can be exposed to inappropriate websites, online predators, identity theft, and cyberbullying. What can parents do to help keep their children safe? You can start by educating yourself at sites such as netsmartz.org, safeteens.com, and blogsafety.com.

In general, safety experts agree that the single most effective way to protect your children is to become involved in their online activities. Families should openly discuss the possible dangers related to social-networking sites, and advise their children to be very careful about what information they reveal. Remember, children will often not exercise the same amount of caution online as they would when meeting someone in person. This is because the Internet creates a sense of anonymity and the lack of physical interaction provides a false sense of security. Children also tend to tailor their information for friends to read, forgetting that others can see it.

To promote safer use of the Internet, consider taking the following steps:

- Locate computers in places where there is little privacy such as the living room or family room. Children may be less likely to engage in risky online behavior if other family members can readily view their actions.
- Let your children know that it's important to tell you if they are ever approached online or receive inappropriate or threatening content. (If this happens, don't delete any messages or images; they can help law enforcement trace the activity back to its source.) Teach them to be careful about what they post about their friends. Some of the most predator-friendly information isn't left by the author of a MySpace page, but by friends posting comments.
- Install parental control software on your computer to help you manage the access your children have to the Internet and protect them from undesirable content. Such software can also provide you with reports of their online activity.

Two To View - A Couple Of Amazing Videos You Don't Want To Miss

Flash Mob Brings Joy To Many

Oh, the joy of it all! To celebrate the 130th anniversary of the founding of Banco Sabadell (a bank in Sabadell, Spain), this flash mob of 100 professional musicians and singers performed "Ode to Joy" to the delight of the surprised crowd.

Wheelchair Goes Underwater

Wheelchair-bound since 1996, Sue Austin got help from dive experts to modify her wheelchair so she could explore the wonders of the ocean while seated. This dream-like video shows Austin piloting through the water past colorful ocean life.

This Month's FAQ - How Do I Make Sure My Firewall Is On?

Question: When reading about computer security, I often see the advice to "make sure your firewall is on." What exactly is a firewall and how do I make sure mine is on?

Answer: A firewall is the primary method for keeping a computer secure from intruders. It allows or blocks traffic into and out of a private network or the user's computer. A personal firewall typically comes with, or is installed in, computers.

To check the status of your firewall and turn it on if needed, follow these steps:

For Windows

1. Open Windows Firewall by clicking the "Start" button, clicking "Control Panel," clicking "Security," and then clicking "Windows Firewall."
2. Click "Turn Windows Firewall on or off." If you are prompted for an administrator password or confirmation, type the password or provide confirmation.
3. Click "On," and then click "OK."

If you want the firewall to block everything, including the programs selected on the Exceptions tab, select the "Block all incoming connections" check box.

For Mac OS X 10.6 and later

1. From the Apple menu, select "System Preferences..." When the System Preferences window appears, from the View menu, select "Security & Privacy" (10.7 and later) or "Security" (10.6).
2. Click the "Firewall" tab.
3. If the orange padlock icon in the lower-left side of the window is closed, click it, and then authenticate with your Mac's administrator username and password. This will allow you to make changes.
4. Click "Turn On Firewall" (10.7 and later) or "Start" (10.6) to enable the firewall.
5. To configure the firewall, click "Firewall Options..."(10.7 and later) or "Advanced..." (10.6). In the sheet that appears, choose from the following options:
 - o For the strictest setting, check "Block all incoming connections."
 - o Check "Automatically allow signed software to receive incoming connections" to allow digitally signed applications access to your network without prompting.
 - o Click "Enable stealth mode" to have your computer ignore pings and similar software that attempts to discover your computer.
 - o Use the plus and minus buttons to add and remove applications from the firewall. When added, you can either allow or block traffic to them.
6. Click "OK" to save your settings.

Short Tutorial - Tips For Successfully Uploading A Video On YouTube

Perhaps you're now a pro at uploading photos on Facebook but haven't yet ventured into the realm of posting videos on YouTube. It's pretty easy to do and well worth the effort. After all, if a picture is worth a thousand words, then a moving video must be worth at least a million. So capture those precious moments at the next family gathering and then review the basic tips below. You can get more [detailed instructions on uploading by clicking here](#):

- **Use a modern browser.** Users with the latest versions of Chrome, Firefox, and Internet Explorer with Silverlight have the most success.
- **Use a supported file format.** Only video files are accepted, while audio and image files must be converted to video. Do not upload files types such as .WOB, .IFO and .BUP, which are not actual video files.
- **Do not use HTML tags, special characters, or excessive text** in the video title or any of the other fields.
- **Upload videos in their original resolution.** Videos should be uploaded at the highest resolution available. Videos uploaded with a 16:9 aspect ratio will fit the player perfectly. Most 4:3 resolutions are supported, but the video will be pillarboxed in order to fit the player.
- **Upload videos in original quality whenever possible.** If you do not need to edit your video, simply upload the unaltered original recording for optimal quality.
- **Upload videos with identical Audio/Video durations.** Audio and Video tracks should begin and end at exactly the same time.
